EDUCATION

Sushant University, Gurugram, Haryana

2023 - 2027

- *Btech CSE (specialization in AI/ML)*

INTERSHIPS

Humana People to People India, New Delhi, Delhi

April 2025 - August 2025

Data Analyst & Prompt Engineer

- Developed Python-based data validation and cleaning pipelines (Pandas, NumPy, regex) that reduced manual QA turnaround time from 3–4 days to ~1-2 hours through automated schema, domain, and consistency checks.
- Built interactive Power BI dashboards and reporting sites with clear metric definitions and narratives, enabling stakeholders to quickly interpret trends and make data-driven decisions.
- Built data matching and standardization utility for village names and codes that cut reconciliation time from 2 hours to 15 minutes, improving data consistency and analytical reliability.

PROJECTS & LEADERSHIP EXPERIENCE

TalentAI: AI-Powered HR Management App, Python, Flask, Pandas, Pydantic, js, PyPDF, HTML, CSS [Github](#) | [Site](#)

- Engineered a Python/Flask recruitment platform using Gemini Pro and Llama 3.1 to automate NLP-based resume parsing and candidate screening.
- Developed a weighted ranking engine and full-stack CRUD features for streamlined employee record management.
- Leveraged Pandas to generate dynamic analytical reports and leaderboards, enabling data-driven hiring decisions and automated workflows.

AI News Analyzer, Python, scikit-learn, Natural Language Processing (NLP), Streamlit,

[Github](#) | [Site](#)

- Developed an end-to-end NLP News Intelligence Toolkit for fake news detection, hate speech classification, and multi-class news categorization, deployed via a Streamlit web application.
- Trained and evaluated scikit-learn linear classifiers with TF-IDF features, achieving 0.89 accuracy on fake news and news categorization tasks and 0.80 accuracy on hate speech detection.
- Designed a modular ML pipeline encompassing text preprocessing, feature engineering, evaluation (precision, recall, F1-score), and serialized model deployment, with analysis of class imbalance, fairness, and generalization risks.

CV Job Matcher AI, Python, scikit-learn, spaCy, Natural Language Processing (NLP), Streamlit, PyPDF2 [Github](#) | [Site](#)

- Built an AI-driven CV–job matching system using Python, scikit-learn (TF-IDF, Cosine Similarity) to quantitatively assess resume–role alignment through NLP-based similarity modeling.
- Implemented robust NLP preprocessing pipelines with spaCy (en_core_web_lg) for lemmatization, keyword extraction, and semantic normalization of unstructured text data.
- Deployed an interactive ML application using Streamlit, integrating PyPDF2 for PDF parsing and Git for version control within a modular, production-ready codebase.

Community service director of Rotaract Club of Sushant University

August 2023 - July 2024

- Directed community service initiatives by overseeing a team of volunteers to execute high-impact local projects.
- Streamlined project planning and stakeholder communication to enhance the club's social footprint and engagement levels.

TECHNICAL SKILLS

- *Computer Languages:* Python, Java, C, C++, SQL, HTML, CSS, JS
- *Tools:* Keras, Git, Power BI, Canvas, Linux, Jupyter
- *Framework/Libraries:* TensorFlow, PyTorch, Streamlit, SpaCy, Scikit-Learn, Pandas, NumPy, Matplotlib
